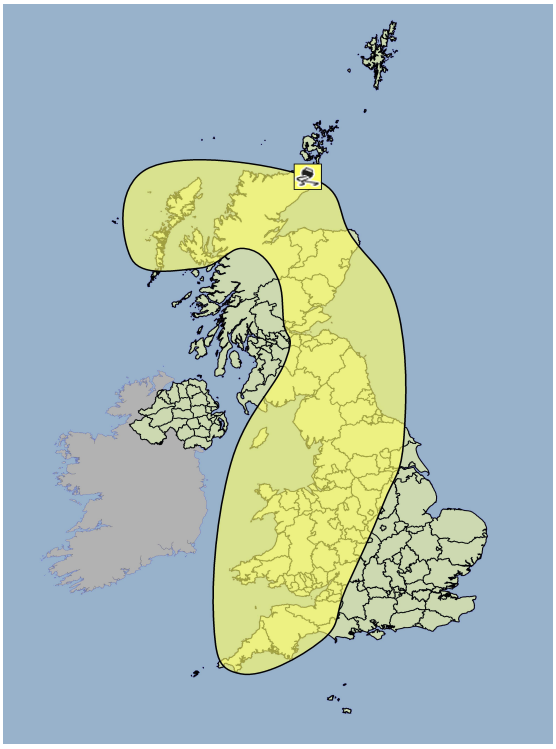
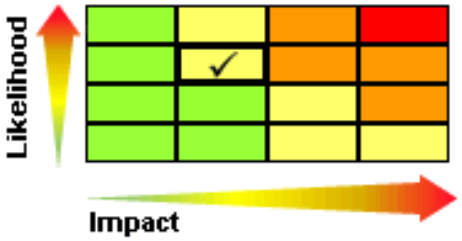
National Severe Weather Warning Service





Chief Forecasters Assessment
The frontal system which brought Friday's rain will clear eastwards on Friday night followed by a colder west or southwesterly airstream. This will bring a wintry mix of showers overnight and at first on Saturday. However, less cold air will follow to many parts from the southwest through Saturday morning confining the risk of snow to northern hills.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **23:00 on Fri, 31st Jan 2014** until **11:00 on Sat, 01st Feb 2014**

Outbreaks of rain will clear eastwards on Friday evening and into the early hours of Saturday. As skies clear, temperatures will fall allowing icy stretches to form on untreated surfaces across northern and western Britain. The situation will be complicated by a wintry mix of showers following from the west. Snow accumulations will mainly occur on ground above around 200 m but some slight accumulations are possible to lower levels locally. In addition the wintry showers may wash off earlier treatment of surfaces increasing the risk of ice.

The public should be aware of the risk of difficult driving conditions.
